
ESC/POS Command Specifications

V1.4

The command is applicable to AK912

◆ INTRODUCTION

- ✧ ESC command is a standard instruction set made by EPSON for needle printer, which has become an effective industrial standard of the control language of needle printers.
- ✧ ESC/POS printing command is a simplified version of ESC printing control commands. ESC/POS instruction set is a major practice applied in voucher printing.
- ✧ The notable characteristic of this command is most of the instructions are a group of codes beginning with ESC control characters.
- ✧ AK912 are compatible with ESC/POS command.

◆ COMMAND FUNCTION LIST

CHAPTER	Commands	HEX	Name
Basic control command			
1.1.1	ESC @	0x1B 0x40	Initialize printer
1.1.2	FF	0x0C	Print and feed paper 1 lines
1.1.3	SO	0x0E	Print and paper feed to the right black bar
1.1.4	LF	0x0A	Line feed
1.1.5	CR	0x0D	Print and carriage return
1.1.6	ESC J <i>n</i>	0x1B 0x4A <i>n</i>	Print and Paper Feed
1.1.7	ESC d <i>n</i>	0x1B 0x64 <i>n</i>	Print and feed paper <i>n</i> lines
1.1.8	HT	0x09	Horizontal tab
1.1.9	GS FF	0x1D 0x0C	Print and paper feed to the label gap
1.1.10	GS 0x99	0x1D 0x99	Read the printer status
Character parameter set command			
1.2.1	ESC ! <i>n</i>	0x1B 0x21 <i>n</i>	Select character printing mode
1.2.2	GS ! <i>n</i>	0x1D 0x21 <i>n</i>	Select character size
1.2.3	ESC M <i>n</i>	0x1B 0x4D <i>n</i>	Select character font
1.2.4	ESC - <i>n</i>	0x1B 0x2D <i>n</i>	Specify/cancels underline mode
1.2.5	ESC E <i>n</i>	0x1B 0x45 <i>n</i>	Specify/cancel emphasized printing
1.2.6	GS B <i>n</i>	0x1D 0x42 <i>n</i>	Specify/cancel white/black inverted printing
1.2.7	ESC V <i>n</i>	0x1B 0x56 <i>n</i>	Specify/cancel char. 90 deg. clockwise rotation
Print layout parameters set command			
1.3.1	ESC \$ <i>nL nH</i>	0x1B 0x24 <i>nL nH</i>	Specify absolute position
1.3.2	ESC D <i>n1 n2...nk</i> NULL	0x1B 0x44 <i>nL,nk</i> 00(FF)	Set horizontal tab position
1.3.3	ESC 2	0x1B 0x32	Set default line spacing
1.3.4	ESC 3 <i>n</i>	0x1B 0x33 <i>n</i>	Set line feed amount
1.3.5	ESC SP <i>n</i>	0x1B 0x20 <i>n</i>	Set character right space amount
1.3.6	ESC a <i>n</i>	0x1B 0x61 <i>n</i>	Position alignment
1.3.7	GS L <i>n</i>	0x1D 0x4C <i>nL nH</i>	Set left margin
Graphics / image print command			
1.4.1	ESC * <i>m nL nH d1...dk</i>	0x1B 0x2A <i>m nL nH</i> <i>d1...dk</i>	Specify bit image mode

1.4.2	GS * <i>x y d1...dk</i>	0x1D 0x2A <i>x y d1...dk</i>	Define download bit images
1.4.3	GS / <i>n</i>	0x1D 0x2F <i>n</i>	Print download bit images
1.4.4	FS P n	1C 50 n	Print NV bit image
Bar code printing command			
1.5.1	GS h n	0x1D 0x68 <i>n</i>	Set bar code height
1.5.2	GS w n	0x1D 0x77 <i>n</i>	Set bar code horizontal size
1.5.3	GS H n	0x1D 0x48 <i>n</i>	Select HRI character print position
1.5.4	GS f n	0x1D 0x66 <i>n</i>	Select HRI character font
1.5.5	GS k m ...	0x1D 0x6B <i>m</i>	Print bar code
1.5.6	GS Z n	0x1D 0x5A <i>n</i>	Select the 2D bar code
1.5.7	ESC Z m n k sL sH <i>d1...dn</i>	0x1B 0x5A <i>m n k sL</i> <i>sH d1...dn</i>	Print the 2D bar code
Curve the print command			
1.1.1	GS ‘	0x1D 0x27 <i>n x1sL x1sH</i> <i>x1eL x1eH ... xnsL xnsH</i> <i>xneL xneH</i>	Print curve
1.1.2	GS “	0x1D 0x22 <i>n xL xH c1</i> <i>c2 ... 0x00</i>	Print character on the curve
Print Chinese characters command			
1.7.1	FS &	0x1C 0x26	Specify Chinese character mode
1.7.2	FS .	0x1C 0x2E	Cancel Chinese character mode
1.7.3	FS U nL nH	0x1C 0x55 <i>nL nH</i>	Print Unicode code character
1.7.4	ESC t n	0x1B 0x74 <i>n</i>	Select character code page
1.7.5	ESC R n	0x1B 0x52 <i>n</i>	Select international characters
1.7.6	US f	1F 66 id nL nH crc16L crc16H d1...dn	In frame mode data transmission
1.7.7	US q	1F 71 id	Frame status query
Especial command			
1.8.1	US sBrP (1F 73 42 72 50)	0x1F 0x73 0x42 0x72 0x50	Read the Bluetooth password
1.8.2	US sBsP k n1...nk	0x1F 0x73 0x42 0x73 0x50 k n1...nk	Setup the Bluetooth password

The illustration of the format in description:

【COMMAND】 + **【parameter】**

【COMMAND】 are commands consisting of ESC characters and command characters in bold. ESC characters are ESC(0x1B), FS(0x1C),GS(0x1D). Some single byte commands have no ESC characters.

【parameter】 are parameters, which are not digital characters but the value of the characters in italic and bold.

For example, **ESC J n**

ESC J is the command while *n* is the parameter.

- *n, nL, nH, n1, n2, nk, m, d1, dk, x, y, c1, c2* indicates a certain value. Please pay attention to the difference between decimal and hexadecimal digit while using.
- To indicate a hexadecimal digit, it is prefixed by 0x in this instruction. For example, 0x10 indicates 16 of decimal digit.

1.1 Basic control command

1.1.1 ESC @

[Name]	Initialize printer	
[CODE]	ASCII	ESC @
	Hex.	0x1B 0x40
	Decimal	27 64
[RANGE]		
[DESCRIPTION]	Clear data in printing buffer area. Set printing commands to defaults.	
[ATTENTION]	Not set to the original factory defaults, but to the default parameters of printing command setting.	
[DEFAULT VALUE]		
[REFERENCE]		

1.1.2 FF

[Name]	Print and feed paper 1 lines	
[CODE]	ASCII	FF
	Hex.	0x0C
	Decimal	12
[RANGE]		
[DESCRIPTION]	Print all data in printing buffer area and paper feed paper 1 lines	
[ATTENTION]	<ul style="list-style-type: none"> • All buffer data is deleted after printing • Sets the print position to the beginning of the next line after execution. 	
[DEFAULT VALUE]		
[REFERENCE]	SO	

1.1.3 SO

[Name]	Print and paper feed to the right black bar	
[CODE]	ASCII	SO
	Hex.	0x0E
	Decimal	14
[RANGE]		
[DESCRIPTION]	Print all data in printing buffer area and paper feed to the right black bar.	
[ATTENTION]	<ul style="list-style-type: none"> • This command is used to locate to the minor black bar when printing the vouchers to be printed. It can be used with FF command to print double-layered vouchers to be printed. • Delete the data in buffer area after printing. • This command is to set the starting point of printing lines. • If there is a black bar in the paper, paper feeding will stop at the right black bar after all data in the buffer area are printed. If there is not a black bar in the paper, paper feeding will stop at a distance of 20cm. 	
[DEFAULT VALUE]		
[REFERENCE]	FF	

1.1.4 LF

[Name]	Line feed	
[CODE]	ASCII	LF
	Hex.	0x0A
	Decimal	10
[RANGE]		
[DESCRIPTION]	Print all data in printing buffer area and paper feed one line forward with the line space set. ESC 2 , ESC 3 can set the line space.	
[ATTENTION]	<ul style="list-style-type: none"> • This command is to set the starting point of printing lines. • If there is no data in line buffer area, paper feeds one line forward only. • If this command is followed by CR command, paper feeds one line forward only. 	
[DEFAULT VALUE]		
[REFERENCE]	CR ESC 2 ESC 3	

1.1.5 CR

[Name]	Print and carriage return	
[CODE]	ASCII	CR
	Hex.	0x0D
	Decimal	13
[RANGE]		
[DESCRIPTION]	Print all data in printing buffer area and paper feed one line forward with the line space set. ESC 2 , ESC 3 can set the line space.	
[ATTENTION]	<p>This command is to set the starting point of printing lines.</p> <ul style="list-style-type: none"> • If there is no data in line buffer area, paper feeds one line forward only. • If this command is followed by LF command, paper feeds one line forward only. 	
[DEFAULT VALUE]		
[REFERENCE]	LF ESC 2 ESC 3	

1.1.6 ESC J n

[Name]	Print and Paper Feed	
[CODE]	ASCII	ESC J n
	Hex.	0x1B 0x4A n
	Decimal	27 74 n
[RANGE]	$1 \leq n \leq 255$	
[DESCRIPTION]	Print all data in printing buffer area and paper feed to n vertical dot pitch plus line space set. Each dot pitch is 0.125mm.	

[ATTENTION]	<ul style="list-style-type: none"> Set the line space to the length of Command ESC2 & ESC 3 set. Set the beginning of the next line as the starting point when this command is executed. If there is no data in line buffer area, paper feeds n vertical dot pitch.
[DEFAULT VALUE]	
[REFERENCE]	ESC d n

1.1.7 ESC d n

[Name]	Print and feed paper n lines	
[CODE]	ASCII	ESC d n
	Hex.	0x1B 0x64 n
	Decimal	27 100 n
[RANGE]	$1 \leq n \leq 255$	
[DESCRIPTION]	Print all data in printing buffer area and paper feed n lines.	
[ATTENTION]	<ul style="list-style-type: none"> This command sets the beginning of a line as the printing starting point. This command can be impacted by such line space setting commands as ESC 2 & ESC 3. This command can be impacted by font size setting commands. 	
[DEFAULT VALUE]		
[REFERENCE]	ESC J n	

1.1.8 HT

[Name]	Horizontal tab	
[CODE]	ASCII	HT
	Hex.	0x09
	Decimal	9
[RANGE]		
[DESCRIPTION]	Move to the next horizontal tab.	
[ATTENTION]	<ul style="list-style-type: none"> Set the horizontal tab with Command ESC D. If the next horizontal tab is not set, this command is passed. If the next horizontal tab is occupied, move to the next tab but one. The default of horizontal tab is 8-character width of character A(12×24), i.e. Column 9, 17, 25 ... 	
[DEFAULT VALUE]		
[REFERENCE]	ESC D	

1.1.9 GS FF

[Name]	Print and paper feed to the label gap	
[CODE]	ASCII	Gs FF
	Hex.	0x1D 0x0C
	Decimal	29 12
[RANGE]		
[DESCRIPTION]	Print all data in printing buffer area and paper feed to the next segmentation line of the label.	
[ATTENTION]	<ul style="list-style-type: none"> It locates to the segmentation line when this command is applied for labels. This command sets the beginning of a line as the printing starting point. 	

	<p>After all data printed in buffer area, for label printing, paper feeds to the next segmentation line of the label; for printing plain paper without right black bar, paper feeds to a distance of 20cm; for printing paper with right black bar, paper feeds to the right black bar.</p> <ul style="list-style-type: none"> This command is only effective when the segmentation line space is 2mm~4mm.
[DEFAULT VALUE]	
[REFERENCE]	

1.1.10 GS 0x99 (0x1D 0x99)

[Name]	Read the printer status																																																																											
[CODE]	ASCII	GS 0x99																																																																										
	Hex.	0x1D 0x99																																																																										
	Decimal	29 153																																																																										
[RANGE]																																																																												
[DESCRIPTION]	<p>This command is to read the interrelated status of the equipment. The feedback characters shall be 1D 99 XX FF when the printer receives the command.</p> <p>Each character of the first five characters indicates:</p> <table border="1" data-bbox="502 920 1150 1433"> <thead> <tr> <th>DIGIT</th> <th>VALUE</th> <th>IMPLICATION</th> </tr> </thead> <tbody> <tr> <td rowspan="2">0</td> <td>0</td> <td>PAPER LOADED</td> </tr> <tr> <td>1</td> <td>PAPER OUT</td> </tr> <tr> <td rowspan="2">1</td> <td>0</td> <td>COVER CLOSED</td> </tr> <tr> <td>1</td> <td>COVER OPEN</td> </tr> <tr> <td rowspan="2">2</td> <td>0</td> <td>TEMPERATURE OF PRINTER ENGINE NORMAL</td> </tr> <tr> <td>1</td> <td>OVERHEAT OF PRINTER ENGINE</td> </tr> <tr> <td rowspan="2">3</td> <td>0</td> <td>BATTERY LEVEL NORMAL</td> </tr> <tr> <td>1</td> <td>LOW BATTERY LEVEL</td> </tr> <tr> <td rowspan="2">4</td> <td>0</td> <td>STANDBY</td> </tr> <tr> <td>1</td> <td>PRINTING</td> </tr> </tbody> </table> <p>The last three digits indicate the paper bin no.</p> <table border="1" data-bbox="497 1480 1139 1868"> <thead> <tr> <th>7</th> <th>6</th> <th>5</th> <th>PAPER BIN NO.</th> <th>REMARKS</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>0</td> <td>0</td> <td>0</td> <td>/</td> </tr> <tr> <td>0</td> <td>0</td> <td>1</td> <td>1</td> <td>VAT INVOICE</td> </tr> <tr> <td>0</td> <td>1</td> <td>0</td> <td>2</td> <td>RECEIPT</td> </tr> <tr> <td>0</td> <td>1</td> <td>1</td> <td>3</td> <td>WAY BILL</td> </tr> <tr> <td>1</td> <td>0</td> <td>0</td> <td>4</td> <td>/</td> </tr> <tr> <td>1</td> <td>0</td> <td>1</td> <td>5</td> <td>/</td> </tr> <tr> <td>1</td> <td>1</td> <td>0</td> <td>6</td> <td>/</td> </tr> <tr> <td>1</td> <td>1</td> <td>1</td> <td>7</td> <td>/</td> </tr> </tbody> </table>			DIGIT	VALUE	IMPLICATION	0	0	PAPER LOADED	1	PAPER OUT	1	0	COVER CLOSED	1	COVER OPEN	2	0	TEMPERATURE OF PRINTER ENGINE NORMAL	1	OVERHEAT OF PRINTER ENGINE	3	0	BATTERY LEVEL NORMAL	1	LOW BATTERY LEVEL	4	0	STANDBY	1	PRINTING	7	6	5	PAPER BIN NO. 1.2 Character parameter set command

1.2.1 ESC ! n

[Name]	Select character printing mode																																				
[CODE]	ASCII	ESC ! n																																			
	Hex.	0x1B 0x21 n																																			
	Decimal	27 33 n																																			
[RANGE]	0 ≤ n ≤ 255																																				
[DESCRIPTION]	<p>Select printing mode by setting the parameter n.</p> <p>The implication of n is as follows:</p> <table border="1"> <thead> <tr> <th>DIGIT</th> <th>VALUE</th> <th>IMPLICATION</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>0</td> <td>Western character Font A(12x24) Chinese character Font A(24x24)</td> </tr> <tr> <td>1</td> <td>—</td> <td>Undefined</td> </tr> <tr> <td>2</td> <td>—</td> <td>Undefined</td> </tr> <tr> <td rowspan="2">3</td> <td>0</td> <td>Unlock bold mode</td> </tr> <tr> <td>1</td> <td>Bold mode</td> </tr> <tr> <td rowspan="2">4</td> <td>0</td> <td>Unlock double-height mode</td> </tr> <tr> <td>1</td> <td>Set double-height mode</td> </tr> <tr> <td rowspan="2">5</td> <td>0</td> <td>Unlock double-width mode</td> </tr> <tr> <td>1</td> <td>Set double-width mode</td> </tr> <tr> <td>6</td> <td>—</td> <td>Undefined</td> </tr> <tr> <td rowspan="2">7</td> <td>0</td> <td>Unlock underline mode</td> </tr> <tr> <td>1</td> <td>Set underline mode</td> </tr> </tbody> </table>		DIGIT	VALUE	IMPLICATION	0	0	Western character Font A(12x24) Chinese character Font A(24x24)	1	—	Undefined	2	—	Undefined	3	0	Unlock bold mode	1	Bold mode	4	0	Unlock double-height mode	1	Set double-height mode	5	0	Unlock double-width mode	1	Set double-width mode	6	—	Undefined	7	0	Unlock underline mode	1	Set underline mode
DIGIT	VALUE	IMPLICATION																																			
0	0	Western character Font A(12x24) Chinese character Font A(24x24)																																			
1	—	Undefined																																			
2	—	Undefined																																			
3	0	Unlock bold mode																																			
	1	Bold mode																																			
4	0	Unlock double-height mode																																			
	1	Set double-height mode																																			
5	0	Unlock double-width mode																																			
	1	Set double-width mode																																			
6	—	Undefined																																			
7	0	Unlock underline mode																																			
	1	Set underline mode																																			
[ATTENTION]	<ul style="list-style-type: none"> • When both double-height and double-width mode are selected, the character size is quadrupled. • This command can be used to set underline mode for all characters. The underline is two-dot width defaulted, unless is set one-dot width by ESC. It cannot be used to set underline mode for the space, rotated and reversed characters generated by HT. • When there are double-height or even bigger height characters in a line, all characters align to the baseline. • ESC M can be used to set font. The last setting command takes the effect. • ESC E can be used to lock or unlock bold mode. The last setting command takes the effect. • ESC – can be used to lock or unlock underline mode. The last setting command takes the effect. • GS ! can be used to set character size. The last setting command takes the effect. • This command is effective for English characters, numbers, symbols and Chinese characters. • If n is not meant to be 0, set any digit of 1, 2 and 6 of n to 1. 																																				
[DEFAULT VALUE]	n = 0																																				
[REFERENCE]	ESC – ESC E GS ! ESC M																																				

1.2.2 GS ! n

[Name]	Select character size																																									
[CODE]	ASCII	GS ! n																																								
	Hex.	0x1D 0x21 n																																								
	Decimal	29 33 n																																								
[RANGE]	0 ≤ n ≤ 255 (1 ≤ vertical expansion ≤ 8, 1 ≤ horizontal expansion ≤ 8)																																									
[DESCRIPTION]	Set character height with any digit of 0~3. Set character width with any digit of 4~7. <table border="1" style="margin-left: auto; margin-right: auto;"> <tr> <td>WIDTH</td> <td>7</td> <td>6</td> <td>5</td> <td>4</td> <td>HEIGHT</td> <td>3</td> <td>2</td> <td>1</td> <td>0</td> </tr> <tr> <td>ONE TIME</td> <td>-</td> <td>-</td> <td>0</td> <td>0</td> <td>ONE TIME</td> <td>0</td> <td>0</td> <td>0</td> <td>0</td> </tr> <tr> <td>DOUBLE</td> <td>-</td> <td>-</td> <td>0</td> <td>1</td> <td>DOUBLE</td> <td>0</td> <td>0</td> <td>0</td> <td>1</td> </tr> <tr> <td>TRIPLE</td> <td>-</td> <td>-</td> <td>1</td> <td>0</td> <td>TRIPLE</td> <td>0</td> <td>0</td> <td>1</td> <td>0</td> </tr> </table>		WIDTH	7	6	5	4	HEIGHT	3	2	1	0	ONE TIME	-	-	0	0	ONE TIME	0	0	0	0	DOUBLE	-	-	0	1	DOUBLE	0	0	0	1	TRIPLE	-	-	1	0	TRIPLE	0	0	1	0
WIDTH	7	6	5	4	HEIGHT	3	2	1	0																																	
ONE TIME	-	-	0	0	ONE TIME	0	0	0	0																																	
DOUBLE	-	-	0	1	DOUBLE	0	0	0	1																																	
TRIPLE	-	-	1	0	TRIPLE	0	0	1	0																																	
[ATTENTION]	<ul style="list-style-type: none"> • This command is effective for all characters, English characters, numbers, symbols and Chinese characters, but characters read by barcode. • If n is defined out of range, unknown results may occur. • Paper feed goes vertical, normal to the horizontal direction. However, if the character is rotated 90° clockwise, the vertical direction and horizontal direction become reversed, i.e. this command is subordinate to ESC V. When both commands are effective, the character rotates first and enlarges after that. • When different sized characters are enlarged in a line, all characters align to the baseline. • ESC ! can be used to set character size. The last setting command takes the effect. • If n is not meant to be 0, set any digit of 6 and 7 of n to 1. 																																									
[DEFAULT VALUE]	n = 0

[ATTENTION]	<ul style="list-style-type: none"> When format 1 command is in use, if the data length is specified by barcode type, the subscript of dk, k (the data length of barcode the printer has received) should be the specified data length. If it does not equal to the specified data length, this command becomes ineffective. Please refer to barcode standards for specified data bit length of different types of barcode. 																																																																																			

	<ul style="list-style-type: none"> ● The barcode characters the printer receives should be contained in the character set the barcode type has specified. If any character cannot be found in the character set, this command becomes ineffective. Please refer to barcode standards for specified barcode character set of different types of barcode. ● When format 2 command is in use, <i>nL</i>的 value should be equal to the data length of the barcode, if the data bit length is specified by this type of barcode. If <i>n</i> does not equal to the specified data length, this command becomes ineffective. Please refer to barcode standards for specified data bit length of different types of barcode. ● When the data length of INTERLEAVED 25(ITF) barcode is odd number, the printer calculates the parity-check code automatically and complement it to even number. If format 1 is in use to print ITF barcode, <i>k</i> (the barcode data length the printer has received) value should be odd number. If format 2 is in use to print ITF barcode, <i>n</i> value should be odd number. ● If the horizontal size exceeds the printing area, the part exceeded shall be ignored. ● This command is not impacted by printing mode(bold, overstriking, underline, font size and reverse printing). ● Barcode coding rule should be followed when printing barcodes, otherwise barcode scanning is unable. ● When printing the readable characters, the invisible characters of CODE93 & CODE128 cannot be printed. They are substituted by '□'. ● CODE39 does not contain extended CODE39 (EXTERN CODE 39) . Please remember to add '*' at both the beginning and the end of the printed content. ● CODE93 does not contain extended CODE93 (EXTERN CODE 93) . ● CODE128 barcode selects characters automatically (CODE A, CODE B, 或CODE C) and print the type of barcode according to the requirement, usually CODE A. ● If <i>m</i> is not meant to be 0x00, it can be set as 0x80. The result is the same with <i>m</i>=0x00.

1.6 Curve the print command

1.6.1 GS ‘ n xIsL xIsH xleL xleH... xnsL xnsH xneL xneH

[Name]	Print curve	
[CODE]	ASCII	GS ‘ n xIsL xIsH xleL xleH ... xnsL xnsH xneL xneH
	Hex.	0x1D 0x27 n xIsL xIsH xleL xleH ... xnsL xnsH xneL xneH
	Decimal	29 39 n xIsL xIsH xleL xleH ... xnsL xnsH xneL xneH
[RANGE]	$0 \leq n \leq 8$	
[DESCRIPTION]	As is shown in the enlarged drawing below, each curve consists of several horizontal segments(a dot can be regarded as a segment with the length of 1).This command is used to print n segments of a horizontal line. The curve segment needed by the user can be produced	

	<p>by continuous use of this command.</p> <p><i>n</i> number of segments;</p> <p><i>xksL</i> The lower position of the horizontal axis of the starting point of Segment k;</p> <p><i>xksH</i> The higher position of the horizontal axis of the starting point of Segment k;</p> <p><i>xkeL</i> The lower position of the horizontal axis of the ending point of Segment k;</p> <p><i>xkeH</i> The higher position of the horizontal axis of the ending point of Segment k;</p> <p>The coordinate position counts from the left end of the printing area. The minimum value is 0.</p> <p>The maximum value is 383, i.e. the maximum of $xkeL+xkeH*256$ is 383.</p> <p>It is not necessary to put segment data in sequence.</p>	
[ATTENTION]	<ul style="list-style-type: none"> When printing a dot, $xkeL = xksL$, $xkeH = xksH$. 	
[REFERENCE]	GS “	

1.6.2 GS “

[Name]	Print character on the curve	
[CODE]	ASCII	GS “ <i>n xL xH c1 c2 ... NULL</i>
	Hex.	0x1D 0x22 <i>n xL xH c1 c2 ... 0x00</i>
	Decimal	29 34 <i>n xL xH c1 c2 ... 0</i>
[RANGE]	$0 \leq n \leq 1$	
[DESCRIPTION]	<p>This command is used to print the characters on the curve in current font. Characters are automatically 90°rotated by this command when printing(character string rotates clockwise).</p> <p><i>n</i> is character number.</p> <p><i>xL xH</i> is the higher and lower position of the horizontal axis of the character.</p> <p><i>c1 c2 ... NULL</i> is the character string that ends with 0.</p>	
[ATTENTION]	<ul style="list-style-type: none"> This command is only effective between two ESC ‘ commands. The printer start printing 90°rotated characters in current line right after it receives this command. When there have been characters in current horizontal dotted line, it needs to set other values as character numbers to print other characters, but only limit to 0 and 1. There can be at most 2 characters in one horizontal dotted line. It needs enough number of horizontal dots or segments beneath the horizontal line to print complete characters.

1.7 Language Control Commands

1.7.1 FS &

[Name]	Specify Chinese character mode	
[CODE]	ASCII	FS &
	Hex.	0x1C 0x26
	Decimal	28 38
[DESCRIPTION]	Select Chinese character mode.	
[ATTENTION]	Chinese character mode is selected when the power switch of printer is on.	
[REFERENCE]	FS .	

1.7.2 FS .

[Name]	Cancel Chinese character mode	
[CODE]	ASCII	FS .
	Hex.	0x1C 0x2E
	Decimal	28 46
[RANGE]		
[DESCRIPTION]	Unlock Chinese character mode. When Chinese character mode is unlocked, the code exceeding 0x80 is still processed as ASCII characters. No Chinese characters will be printed, unless select Chinese character mode again with command FS & .	
[ATTENTION]	<ul style="list-style-type: none"> Command ESC @ will make the printer select Chinese character mode after the equipment is rest. 	
[DEFAULT VALUE]		
[REFERENCE]	FS &	

1.7.3 FS U *nL nH*

[Name]	Print Unicode code character	
[CODE]	ASCII	FS U <i>nL nH</i>
	Hex.	0x1C 0x55 <i>nL nH</i>
	Decimal	28 85 <i>nL nH</i>
[RANGE]		
[DESCRIPTION]	Print <i>n</i> ($n = nL + nH * 256$) Unicode characters.	
[ATTENTION]	<ul style="list-style-type: none"> Unicode is double-byte code. The $2 * n$ ($n = nL + nH * 256$) bytes after this command is processed as Unicode characters. This command only supports the Chinese characters contained in GBK font, not all Chinese characters contained in Unicode. This command is not impacted by Chinese commands. This command can be embedded with other commands like ESC / GS / FS, but in Unicode. Please refer to ‘Chinese ISN Extension Standard’ made by the Technical Committee of Information Technology Standardization for details of GBK. Please check the official website of Unicode http://www.unicode.org for the details of Unicode. 	
[DEFAULT VALUE]		

1.7.4 ESC t n

[Name]	Select character code page	
[CODE]	ASCII	ESC t n
	Hex.	0x1B 0x74 n
	Decimal	27 116 n
[RANGE]	0 ≤ n ≤ 50 , n = 252, 253, 254, 255	
[DESCRIPTION]	Selects a code page n from the character code table as follows.	
	n	Character Type
	0	Page 0 USA, Standard Europe [CP437]
	1	Page 1 Katakana
	2	Page 2 Multilingual(Latin-1) [CP850]
